

## NEW FASTENING CLIP FOR TERRACES

 **Real DECK®**

# CLIP2\*

Clip 2\* has a design that, fits perfectly between the 2 decking pieces. This unique design allows the connection of the decking planks without visible screw heads. The clip structure acts as a spacer..

This promotes air circulation under the decking and the wood is protected from the underside against excessive water absorption, which significantly eliminates the formation of mould.

The clip is oversized to ensure uniform expansion between the terrace boards. Made of a special hardened PVC material that guarantees resistance to all weathering. Clip 2\* provides easy and quick installation.
